Professional Summary

Final-year Computer Science Engineering student specializing in IoT and Cybersecurity, with hands-on experience building AI-powered applications, including an AI-based Lost & Found System, ScanX (Dual-AI Vulnerability Assessment System), and a Conversational AI application. Skilled in software development, API integration, and backend technologies, with an interest in LLM-based systems, AI workflows, and developing practical AI solutions through experimentation and problem-solving.

Core Skills

Programming & Development: Core Java, OOP, SQL, MySQL, HTML, CSS, JavaScript
AI & LLM Concepts: LLM APIs, Prompt Engineering, AI Workflows, Dual-AI Systems, Conversational AI
Backend & Data: FastAPI, REST APIs, JDBC, Hibernate, PostgreSQL
Cybersecurity: Vulnerability Assessment, Network Security, Web Application Security, OWASP Top 10
Tools & Platforms: Git, GitHub, Kali Linux, Nmap, Wireshark, Burp Suite, OpenVAS
Professional Skills: Problem Solving, Analytical Thinking, Debugging, Experimentation, Teamwork, Communication

Experience

Network Engineer Intern – Aspirare Communications Apr 2026 – Jul 2026
- Gained hands-on experience in network configuration, IPv4 addressing, troubleshooting, device communication, and connectivity issues.

Techie Elite Program – XCEL CORP (USA) 2026
- Gained practical exposure to Java, software development, problem-solving, and industry-oriented technical projects.

Projects

ScanX – Dual-AI Vulnerability Assessment System 2026
- Built an AI-based vulnerability assessment system that uses dual-AI analysis to verify security findings, assess risks, and generate actionable security insights.

Conversational AI – Organizational Knowledge Assistant 2026
- Designed the user interface and developed conversational workflows for an AI application that helps users access organizational information through natural-language queries.

UniFinds – AI-Powered Lost & Found System 2026
- Developed an AI-powered platform for reporting lost items, searching for matching items, and helping users recover their belongings; secured 1st Prize at the Techie Elite 100 Hackathon.

OWASP Juice Shop – Web Application Security Testing 2026
- Tested web application vulnerabilities using Burp Suite and analyzed security issues based on OWASP Top 10.

Smart Door Access System 2025
- Built an IoT-based access control system using ESP32 and RFID authentication to manage secure entry.

Education

B.E. Computer Science (IoT & Cyber Security with Blockchain), T John Institute of Technology Present
CGPA: 8.62

Pre-University (PCMB), Sudarshan Vidya Mandir 2022
Percentage: 55.55 %

SSLC, Loyola High School 2020
Percentage: 78.9 %

Certifications

Microsoft:	Azure AI Fundamentals (AI-900), Azure Fundamentals (AZ-900)
NPTEL:	Data Structures and Algorithms Using Java
XCEL CORP:	Embedded Systems & IoT with AI/ML
Cisco:	Networking Basics
Infosys Springboard:	Fundamentals of Cryptography
Forage:	Deloitte Cyber Job Simulation
CySecK:	CyberSmart

Achievements & Activities

Techie Elite 100 Hackathon – UniFinds 2026
- Secured 1st Prize for developing an AI-powered Lost & Found System.

Research Publication – Smart Door Access System, RATE-2025 2025
- Published and presented research on an IoT-based multi-factor access system using RFID, computer vision, and ESP32.

Volunteer – Quality Circle Forum of India (QCFI)
- Participated in industry training and knowledge-sharing programs covering 5S, Kaizen, Lean, Six Sigma, and TQM.
